PRODUCT DESIGNER

COMPLEX WORKFLOWS, DIGITAL PRODUCTS,
AND AI-ASSISTED SYSTEMS

Linjun Zhang

Canadian Citizen | 3-Year OPT, TN Eligible

SUMMARY

I design products for complex workflows where edge cases and implementation constraints shape the experience. Across B2B, operational, and AI-assisted products, I turn technical requirements into clear product logic, interaction flows, and interfaces that teams can build and rely on.

EXPERIENCE

2025.09 - 2026.03

Product Designer | AWS x Washington Dept. of Fish & Wildlife

Shipped an AI-assisted salmon identification platform that transformed a fragmented, expert-dependent field-to-lab workflow into a shared system for technicians and biologists.

Defined a human-in-the-loop triage workflow that used model confidence to route uncertain cases for expert review, making the system usable under limited training data and strict accuracy requirements.

Designed a validation feedback loop that captured expert review decisions, improved traceability, and fed those outcomes back into the system to support continuous improvement.

Reduced turnaround time from days or weeks to near-immediate results; now used internally by the Washington Department of Fish & Wildlife.

2025.06 - 2025.09

UI/UX Designer | Bosch Home Comfort

Translated complex product and quality information into clear digital experiences for Bosch HVAC products and internal events, helping partners and internal teams better access and understand key information.

Applied the Bosch global design language across mobile and event touchpoints, enabling faster in-house execution for work that was previously outsourced.

2025.03 - 2025.06

Product Designer | T-Mobile

Led product design for a dual-sided ACL rehabilitation platform, translating sensor-driven system behavior into clear workflows for home-based patient recovery and real-time clinician monitoring.

Defined interaction logic, calibration rules, and multi-state product behavior to turn raw movement data into real-time feedback and automated tracking.

Streamlined clinician review and reporting workflows, cutting session review time by approximately 32% and reducing manual administrative effort by approximately 40% during pilot evaluations.

2022.10 - 2023.04

UX Designer | Sheridan College

Designed information architecture and responsive layouts for the Sheridan College 2023 graduation program website, improving navigation and access to event information for 3,000+ attendees across devices.

2022.04 - 2022.09

UX Designer | Skill Squirrel

Designed onboarding flows and dashboards for a digital credentialing platform, increasing core-action completion by 18% through clearer guidance toward certificate issuance and stronger interaction logic.
